**August 2008  
Monthly Program**

**Pro-Seal Products  
Educational Program**

**Presented by:**

**Aaron Erickson**

The Pro-Seal Products educational program is an in-depth look at polycarbon/polycarbonate technology and innovative methods to implement the technology in solving major infrastructure and building envelope challenges. Polycarbon/polycarbonate technology products are high density, high molecular weight, elastoplastic material compounds for remediation, restoration, waterproofing, repelling water, and/or sealing of concrete, metal, glass, wood, and most all-solid composition materials.

Aaron will be discussing the basics of polycarbon/polycarbonate technology, some of the extreme waterproofing challenges ProSeal has faced and the solutions they have provided and an overview of basic building envelope solutions for roofing, decks, interior flooring systems, parking decks/garages and more.

\*\*\*\*\*

Aaron Erickson came to Pro-Seal two years ago after working in the aquatics industry for nine years. His experience in the construction trades dates back to 1993. He has been educating the marketplace and helping them solve problems throughout his career. Working with both manufacturers and contractors gives him a great perspective in leading the team through successful projects. Aaron's undergrad studies took place at the University of Mary and the University of Montana.
